

1,5 ECTS Doctoral Course #3193

The Vascular Brain

Cerebrovascular development, cell signalling, blod flow dynamics, imaging methods and contributions to neurodegenerative disease

Center for Molecular Medicine, May 11-15th, 2020

Course purpose: Brain function depends on constant supply of glucose and oxygen from blood vessels. Efficient communication between neural cells and vessels is essential for correct brain function and relies on selective transport of nutrients across the blood-brain barrier. Brains are particularly vulnerable to dysfunction of blood flow and loss of barrier properties which can lead to dementia and neurological disease. The purpose of the course is to deepen the understanding of concepts underlying cerebrovascular development, cell signaling, imaging methods and vascular contributions to neurodegenerative diseases.

Speakers List (preliminary):

- **Maiken Nedergaard** Univ. Copenhagen - Denmark
- **Ali Erturk** LMU Munchen - Germany
- **Steven T Proulx** Univ. Bern - Switzerland
- **Martin Lauritzen** Univ. Copenhagen - Denmark
- **Benoit Vanhollebeke** Univ. Brussels - Belgium
- **Elisabeth Hillman** Univ. Columbia - US
- **Mickaël Tanter** Institut Langevin - France

Brain glymphatic system
Clear tissue brain imaging
In vivo lymphatic function
Neurovascular coupling
Cerebrovascular development
Cerebral hemodynamics
Ultrasound flow imaging

Organizers

Dr Sebastian Lewandowski, Dept. Clinical Neuroscience, CMM
sebastian.lewandowski@ki.se

Dr Julianna Kele-Olovsson, Dept. Physiology and Pharmacology
julianna.kele@ki.se

**Karolinska
Institutet**
